EDUCATION

The University of Texas at Austin

Austin, TX

Bachelor of Science, Computer Science

Aug 2017 – Dec 2021

Coursework: Data Structures, Algorithms, Software Engineering, iOS Mobile Computing, Modern Web Apps, Object-Oriented Programming, Network Security and Privacy, Computer Architecture, Operating Systems

EXPERIENCE

Technology Summer Analyst Intern

Summer 2021

Citibank

Dallas, TX

- Incoming Summer 2021 Intern

Software Engineer Intern, Full Stack

Apr 2020 – Present

ProMazo

Remote

- Develop 3 career development apps: a React JS PWA, React Native mobile app, and Chrome extension
- Collaborate in Scrum teams to plan sprint milestones and help other developers complete tasks
- Optimize GraphQL data operations and filtering algorithms using AWS AppSync and Elasticsearch
- Control user CRUD operations through AWS AppSync authorization with different Cognito user types
- Implement job data scraping from career search websites and machine learning algorithms to categorize data

Frontend Engineer, Contracted

Aug 2020 – Jan 2021

Edge Learning

Austin, TX

- Developed a React/Redux SaaS platform that tracks student progress for college readiness to parents
- Designed and wireframed changes to provide consistent UI/UX across all device sizes
- Built a proprietary component library in the style of Material UI, using styled components
- Communicated issues and planned features in meetings with board executives, following Agile methodology

PROJECTS

Matchus | *Swift, Django*

Sep 2020 – Dec 2020

- Collaborated on an iOS app using Swift and Xcode that matches users based on preferences and interests
- Implemented location services and cities autocomplete search using Google Maps SDK
- Developed a Django backend to authenticate users and access endpoints for location and interest data
- Utilized Storyboard features to create the overall user flow and organize backend data into tables

Discord Bot Development | *Java, MySQL*

Dec 2018 – Sep 2019

- Collaborated on a Java bot to allow communication between Clash Royale players for card trades
- Retrieved player data via HTTP requests to a public REST API, build Discord commands to filter data
- Maintained a MySQL database of registered bot users and storage of user wish lists
- Co-hosted a Discord server to actively help resolve issues and implement requested features
- Used in 85 Discord servers, with 500+ players registered and 400+ wish lists created

TECHNICAL SKILLS

Languages: Java, Python, C/C++, Swift, MySQL, GraphQL, JavaScript, TypeScript, HTML/CSS

Frameworks: React, Redux, Angular, Node.js, Flask, Express, Django

Developer Tools: Git, Docker, AWS (AppSync, Amplify, Cognito, DynamoDB, Elasticsearch)

Background: Full Stack, UI/UX, App Development (Android/iOS), Linux/Unix
